## CORE SKILLS

AI Research

Agentic AI

Generative AI

AI Prompt Engineering

AI Modeling

Python

PHP

Laravel

MySQL

SQLite

## CREDENTIALS

OCI Generative AI Foundations  
- Oracle University

AI Prompt Engineering  
credential

Python Workshop certificate

## PROFESSIONAL SUMMARY

---

I am an AI researcher, Agentic AI passionate, and Software Developer. I build practical web systems for businesses and I am currently starting research work in applied AI, with a focus on agentic AI, AI modeling, generative AI, and AI prompt engineering.

## EXPERIENCE

---

### CEO & Founder, Kamatrust AI

Founder | AI and Software Product Direction

- Shaping a long-term direction around AI research, agentic AI, AI modeling, and AI-powered software products.
- Focused on practical AI tools and business systems that support real client operations.

### Freelance Software Developer

Business Systems and Client Projects

- Builds practical systems for business operations, retail workflows, asset tracking, and livestock management.
- Works with PHP, Laravel, Python, MySQL, SQLite, clean interfaces, dashboards, and reliable data structures.

### AI Researcher and Agentic AI Learner

Current Focus

- Currently starting applied AI research and growing practical skills in AI agents, AI prompt systems, and applied AI features.
- Brings software engineering discipline into AI products so they are useful, maintainable, and business-ready.

## SELECTED PROJECTS

---

### Assetlite - Asset Management System

- System for organisations to register, track, and monitor assets, covering lifecycle, location, custodian, and maintenance.

### Sell Safe - Retail POS System

- Point of sale system for retailers, covering sales, stock movement, receipts, users, reports, and daily business tracking.

### Farmclick - Livestock Management

- Livestock management platform for farm records, animal tracking, operational data, and easier management of livestock activities.

## OPEN TO

---

Job opportunities, freelance gigs, AI-powered product work, business system development, and research-oriented opportunities connected to AI, agentic AI, software development, and practical automation.
